

DESIGN PROCESS

Our unique process is designed to quickly create unique travel experiences that generate exceptional profit margins and high returns on capital. We add value at every step of the way, giving you every assurance you're investing in the highest quality, longest lasting glamping products available today.

ECO STRUCTURES

Our project delivery process

Identify project scope - High level consultation brief

Here we ask a range of questions including: Overall project objectives, number of accommodation units required, expected room rate, auxiliary buildings required, level of service, environment and logistical considerations and more.

Eco Structures to prove recommendations based on Brief

Here, we'll draw on our global expertise to add invaluable insights that shape better outcomes. These recommendations will be drawn from the results of the high level brief.

Approval Required from Client

High level master planning (design)

Inclusions: Architectural drawings, detailed floor plans of accommodation and auxiliary buildings, site layout and more.

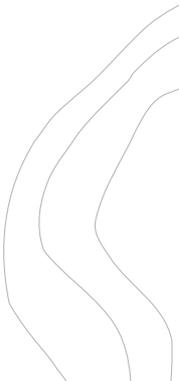

Project Estimate

Once you have decided on the units required, we'll provide a detailed project estimate, and construction schedule.

Approval required from Client

Site specific design

If required, we can assist you with landscaping concepts and interior design. FF&E and more.

Identify project scope - High level consultation brief

Here we ask you a series of questions about your project vision, site location and requirements.

Some design constraint questions include;

- Development objectives: Overall project objective, land size, room requirements, other key amenities, expected opening date.
- Financial objectives: Overall budget, planned room rates, expected occupancy
- Logistical considerations: Climate, terrain, soil, approvals, power
- Accommodation requirements: Total number of units, room sizes, special requirements and level of luxury
- Servicing requirements: Off-grid, power, water, solar

We also ask you to send through a range of photographs of the existing site. For example:

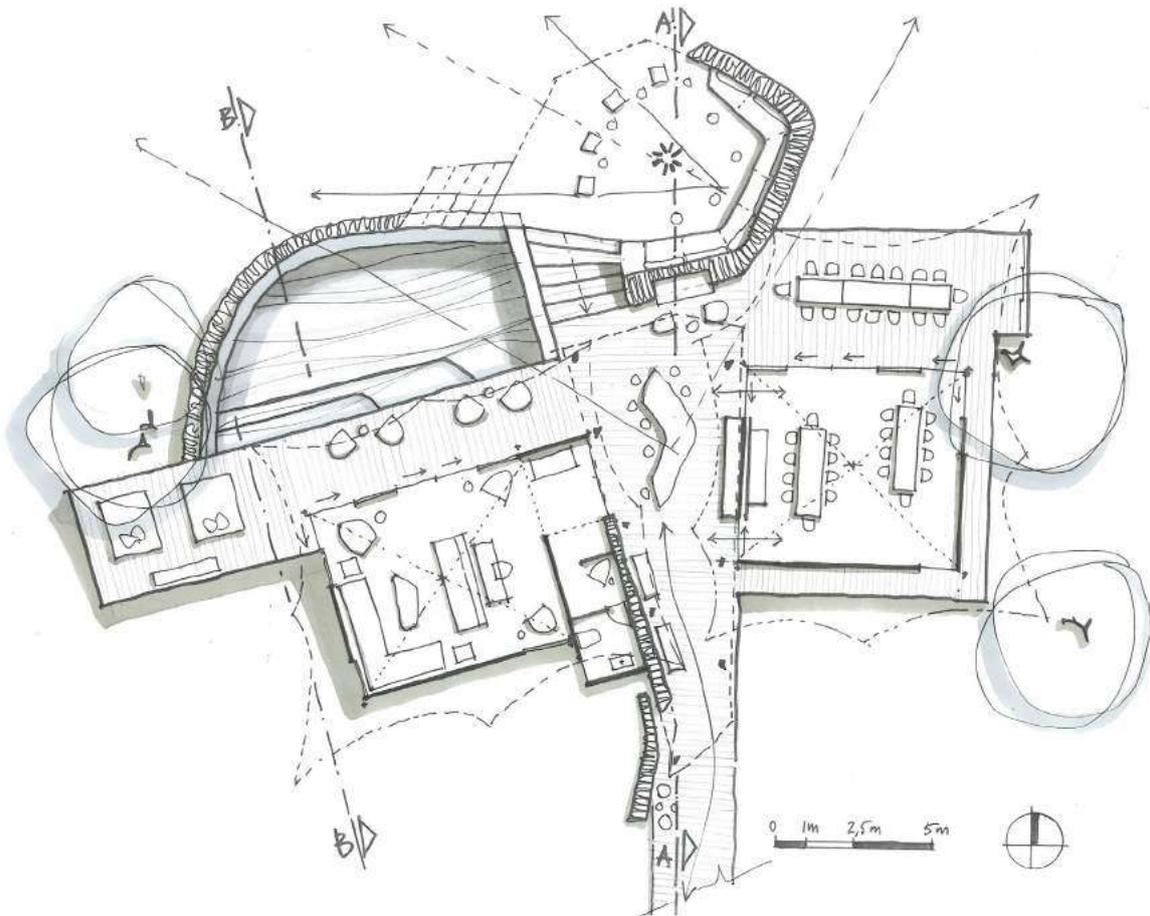

Design Requirements

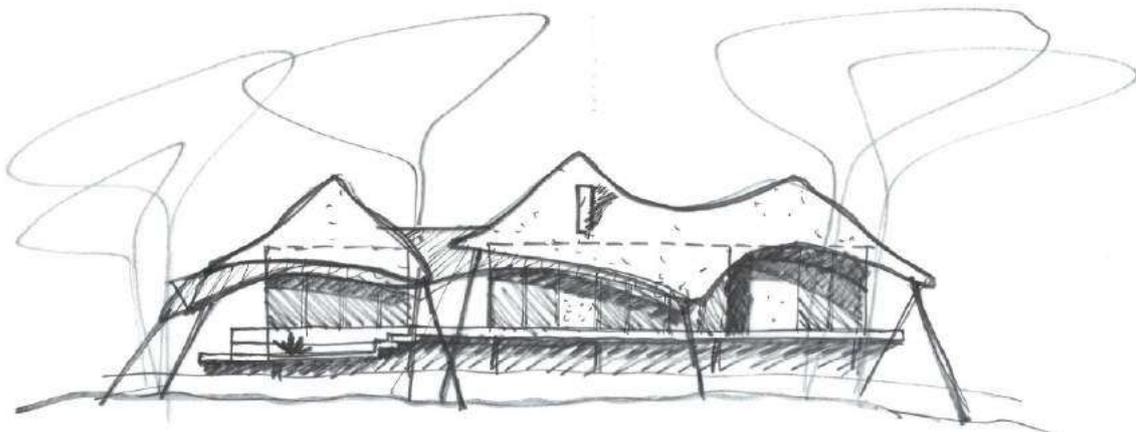

Here you identify your project vision and design requirements.

After receiving this information we can provide an estimated cost per unit.

Concept design from client.

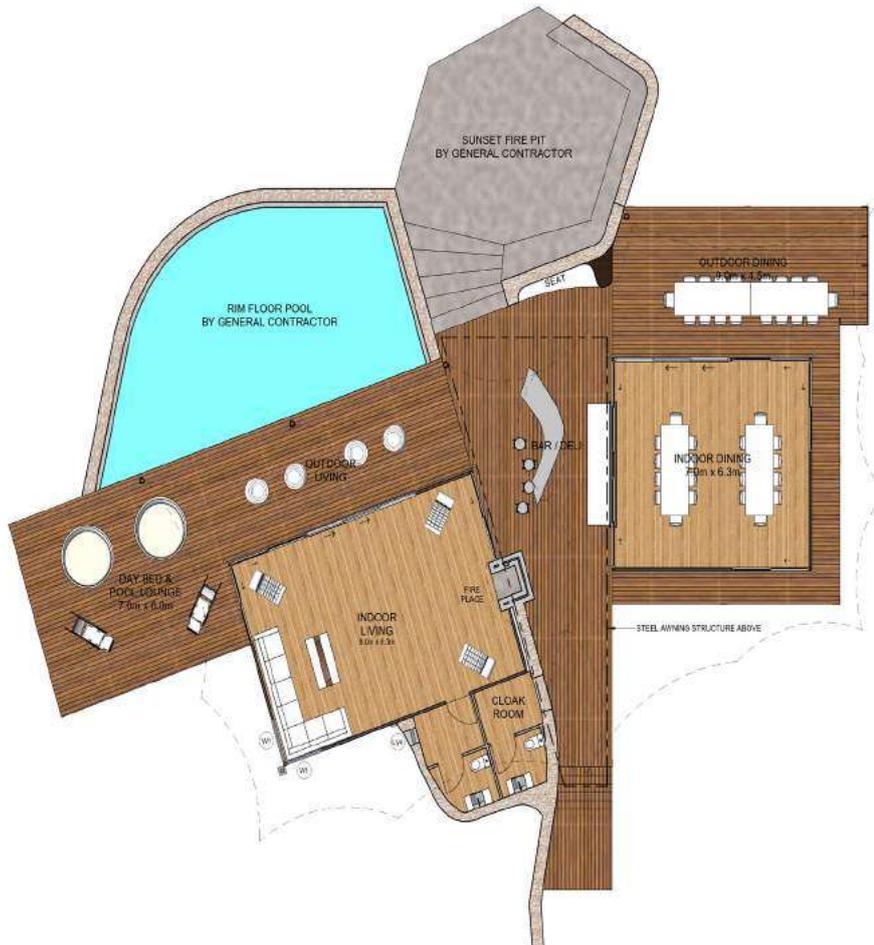

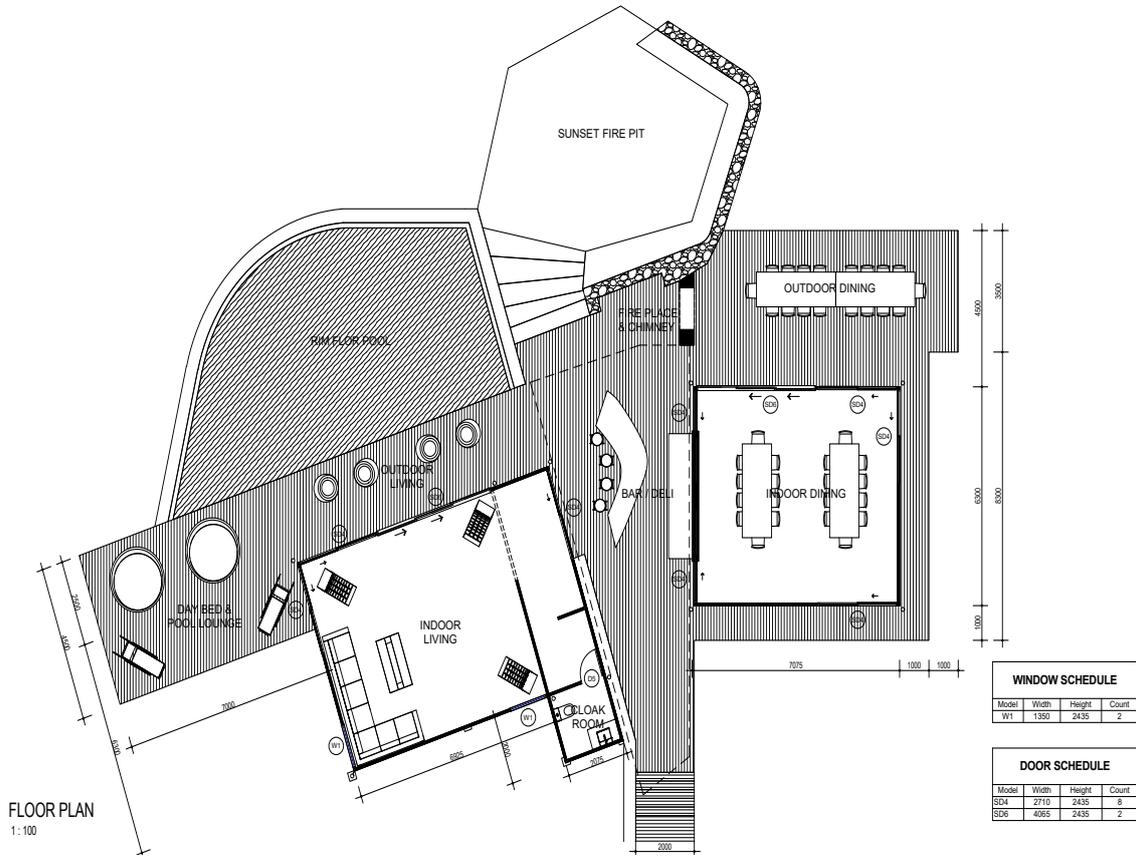

Elevation:

Floor Plans

We design suitable floor plans to match your concept vision and requirements.

3D Drawings and Models

We can engage in 3D depending on the level of detail required.

This exercise can cost between \$2,000 - \$4,000.

REFERENCE LETTER FOR ECO STRUCTURES

In 2017, GAPP Architects were appointed as the designers of a new tented camp in Zambia. After assessing the work of a few tent specialists around the world, Eco Structures were appointed, based on their quick turnaround of the designs, their experience working in remote locations, their willing cooperation and the fact they had the capability to deliver the structure as well as the tent envelope. Throughout the project they were quick to react and professional in advice and execution of the work.

The design process was relatively smooth. GAPP Architects prepared conceptual layouts and 3D views that demonstrated the proposed design intent, which Eco Structures then interpreted and, with their specialist expertise, translated into construction drawings. Through extensive discussion and a rigorous redlining process, we were able to ensure the Eco Structures design complied with our design intent. Much of the time we were guided by Eco Structures as to what was possible and what was not. Where specific details were required to be incorporated by us, these were forwarded to Eco Structures for inclusion in the design.

A full-scale mock-up was built by Eco Structures for our review. It was an essential part of the process and we were very grateful for Karl Plunkett's willingness to produce this. Throughout the process GAPP worked interactively with the competent Eco Structures team and despite the distance between us, the camp was successfully delivered - and the Clients love it.

Kind Regards

SALLY TSILYIANNIS
DIRECTOR / GAPP ARCHITECTS & URBAN DESIGN
